

# KT40 BarcodeDemo UserManual

KT40

1. Please ensure **Settings->Accessibility->Enable Keyreport Scan** is **unchecked** then open **BarcodeDemo** in the menu seen as the picture below. The device is in the state of **Focus Scanning** if the option is checked and then the scanned barcode can be displayed where the cursor is, for example you put the cursor in the **Messaging** or **Phone** interface before scanning. **But the Focus scanning and the demo shouldn't be used simultaneously.** You could use the demo if the option is surely unchecked.

2. Click the scan key to scan when the light beam is aimed at some barcode.

3. Click **Clear** to clean all the scanned results in the interface and click **Close** or press return key to quit the demo.
