

AutoMapa XL - Europe

Category: Software

Manufacturer: AutoMapa

Product from the Archive - production finished

AutoMapa Europe is a detailed navigation map of whole Europe.

It includes full version of Polska XL map, extended by navigation data of European countries provided by the Navteq company.

Searching for travel destinations and navigation all over Europe does not require switching between maps- they are combined into one homogenous product with advantages of the most detailed maps of Polska XL release and maps of Europe of the Navteq company. Information on the degree of precision and the area covered in respective countries are presented on page "Contents".

Just like Polska XL map, AutoMapa Europe release also offers the option of choosing and installing both a selected part and the whole map. Thus the user depending on his/her needs may have at his/her disposal either a set of maps for navigation or, when needed (i.e. when the map is to be stored on a small memory card) only a selected area.
