Matt for graphic designers and players

NTSC 95% Color Gamut

A low black level means that the matrix is capable of displaying a deep, well-saturated shades of black. When przesiadce screen with vivid colors typical habit and need to accept the fact that they are not exaggerated. Very solid fall too black reproduction and contrast. It is characterized by an extremely wide range of colors and viewing angles, without comparison, more comprehensive and wider than the factory-supplied matrices. Looking at the screen from the side, it can be done even at a sharp angle, and the image quality does not deteriorate.

Price for the matrix is a value payments to any configuration **P157SM** Clevo series. It is **not possible** to purchase the same template in the set price.
