Barcode Scanner 2D

Barcode Reader 2D allows you to read, decode and transfer stored data in barcode to your computer. Thanks to dynamic scanning method and the large range of reading, data collector is capable to carefully collecting data, which helps to increase the rate and efficiency of work. Simplified installation procedure, convenient and intuitive design allow to start scanner work very easy and quickly.

Radio-Frequency Identification (RFID)

RFID is a technology used to identify objects and to control the flow products. Reading of information from the special tags that are attached to objects (but not only, because RFID is also applicable to the identification of the animals and even humans) followed by radio. Depending on the type of tag changes the amount of information that can hold as well as the maximum distance at which data can be read. RFID tags, is an alternative to bar codes - more comfortable and more efficient.

Type	RFID LF	RFID HF
Frequency	125KHz	13.56MHz
Potocol	ISO11784/5	ISO 14443A/15693
Read distance	3-8cm	3-8cm
Type	RFID UHF	
Frequency	840-960~868MHz	
Potocol	EPC C1 GEN2/ISO 18000-6C	
Antenna	Circular antenna(3dBi)	
Read distance	6-7m, tags and environment dependent	

Near Field Communication (NFC) (Option)

Its a set of ideas and technology that enables smartphones and other devices to establish radio communication with each other by touching the devices together or bringing them into proximity to a distance of typically 10 cm or less. NFC devices are used in contactless payment systems, similar to those used in credit cards and electronic ticket smartcards and allow mobile payment to replace/supplement these systems. NFC is used for social networking, for sharing contacts, photos, videos or files.

	NFC
Frequency	13.56 MHz
Reading distance	od 2 do 4 cm
Supported card standard	Mifare Write/Read
Supported standards	ISO/IEC 18092

Applicable standards

Operating	-20°C -- +50°C
Storage	-25°C -- +70°C
Humidity	5% - 95% RH non-condensing
Dust	IP6x (dust)
Water	IPx6 (water)
Drop	1.5m

IP66 Resistance

IP stands for Ingress Protection and is essentially a rating system developed by the International Electrotechnical Commission or IEC. This system is now being used to classify different degrees of protection against intrusion or immersion. The IP rating is usually followed by two digits. The first indicates the level of dust-resistance, the second water resistance. Dust-resistance levels goes from 0 up to 6 and water resistance goes from 0 to 8.

No special protection	0		0	No waterproofing
Protection from solid objects greater than 50mm in diameter	1		1	Protection from dripping water
Protection from solid objects greater than 50mm in diameter	2		2	Protection from vertically dripping water (tilted)

When device is equipped with the **WCDMA** module, you need only insert a SIM card in the special slot and you are able instantly connect to the internet. Integrated software allows you to automatically detect and configure connections to mobile networks. Internal **4G** module allows you to use MobiPad U90 devices in contactless payment systems, similar to those used in credit cards and electronic ticket smartcards. NFC is used for mobile payment to replace/supplement these systems. NFC is used for social networking, for sharing contacts, photos, videos or files.

WiFi	802.11 a/b/g/n

You no longer need to worry about whether you will put your device into a briefcase, backpack or travel bag, the problem disappears when you have MobiPad U90. The device weighs just 500g and its dimensions (172 x 80 x 22mm) allow you to take this device everywhere. Professional performance and energy efficiency makes, that MobiPad U90 is in a group of devices which enjoy great popularity in the market in the industrial segment.
