

OEM Windows Vista Home Basic SP2 - EN

Category: Software

Manufacturer: Microsoft

Product from the Archive - production finished

Ideal for the basics of home computing

Windows Vista Home Basic is the edition of Windows for basic home computing needs. If you only want to use your PC for tasks like browsing the Internet, using email or viewing photos, then Windows Vista Home Basic may be the right edition for you. While it won't provide as many benefits as Windows Vista Home Premium, it will help you use your PC more easily and more safely than you could with Windows XP.

The first thing you'll notice about Windows Vista Home Basic is how easy it is to find the programs and files you're looking for. The instant desktop search feature looks at all of your documents, emails, photos, and other files and organises the results in the way that you want to view them. When paired with the built-in web search of Windows Internet Explorer 7 in Windows Vista, you'll spend less time looking for the things that you need and more time on the activities that you care about.

With automatic defenses against malicious software and fraudulent websites, Windows Vista Home Basic enables you and your family to use your computer with greater confidence. In addition, parents can use built-in controls to help ensure their children's computer use is protected and appropriate.

Windows Vista Home Basic makes it easier than ever to set up your new PC, with features that easily transfer all of your data and settings from your old PC to your new one. Furthermore, you can have peace of mind for years to come with technology that keeps your system running quickly and reliably over time.

Simply put, Windows Vista Home Basic provides you with just the essentials you need for home computing.

Note: If your system features a 64-bit processor, you can take advantage of its advanced design in this edition of Windows Vista.
