## Barcode Scanner (option)

Quick and accurate identification of the object relieves the warehouseman and does not create a bottleneck in logistics processes. 2D barcode reader allows you to read, decode and send to your data stored in the bar code. With dynamic scanning capabilities and wide range of reading MobiPad device and I12M quickly and accurately retrieves the data, which helps to increase the rate and efficiency.

Type of scanner	1D	1D/2D
Display type	CCD	CMOS

## NFC (option)

Near field communication (NFC) is a set of ideas and technology that enables smartphones and other devices to establish radio communication with each other by touching the devices together or bringing them into proximity to a distance of typically 10 cm or less.

	NFC
Frequency	13.56 MHz
Reading distance	to 4 cm
Supported standards	ISO14443 A/B ISO15693

## Standards

In terms of device ruggedness, the I12M can withstand a 4-foot drop, and with IP65 sealing, where the first digit "6" means the device is dustproof and the second digit "5" means that the device has the ability to handle low pressure water jets from all directions. The tablet can operate in temperature range of -20° to 60°C, optimized for most industrial deployments. I12M is a sharp looking, sturdy and powerful device that can hold up well against use in harsh environment with its industrial grade rugged design.

Operating temperature	-10°C -- +50°C
Storage temperature	-30C -- +70°C
Dust	IP6x   MIL-STD 810G 510.5
Water	IPx5   IEC529 (JIS C0920) MIL-STD810G 506.5-III
Drop	MIL-STD-810G Method 516.6 - 4ft./1.2m

### MIL-STD 810G

Durability is one of the most important factors to consider when choosing mobile solutions, which is why MobiPad ensures that its fully rugged units operate even when dropped onto concrete, or used in harsh environmental conditions such as heat and cold, dust and rain. Rigorous tests that pass MobiPad products ensures that our customers receive products that meet the highest standards of durability and reliability. MobiPad ensures compliance with the most rigorous standards in this area - **MIL-STD 810G** according to test its products. This standard, set by the US military, is the most widely used international standard.

MIL-STD 810G covers a broad range of tests used to measure equipment reliability:

#### High Temperature: MIL-STD 810G Method 501.5

This test procedure determines computer's operating performance during exposure to high temperatures. This test differs from the standard test that the computer is evaluated under conditions of elevated temperature.

#### Low Temperature: MIL-STD 810G Method 502.5

This test procedure determines computer's operating performance during exposure to low temperature. This test differs from the standard test that the computer is evaluated under conditions of low temperature.

#### Changing Temperatures: MIL-STD 810G Method 503.5

Research on temperature changes is to determine whether the components can withstand sudden changes in the surrounding temperature and do not cause of damage or deterioration in performance.

In this study they are to establish two goals: whether the test item can still be safely operated, and whether it meets the requirements, after being exposed to sudden changes in ambient temperature.

#### Rain: MIL-STD 810G Method 506.5

Tested rain is conducted in order to determine the resistance to rain and wind-driven rain.

#### The collapse of MIL-STD 810G Method 516.6

Tests of free fall (shock) are performed to ensure that equipment can withstand relatively infrequent, non-repetitive shocks and vibrations encountered during handling, transportation and collisions.

MobiPad describes the I12M tablet as "rugged" and with its corner protection it certainly looks much tougher than all those Barbie-thin and fragile consumer tablets. MobiPad's experience in rugged mobile computing, we assume those are just partial specs.
